FOI 7609 - NHS Pain Education

This information is being requested as a freedom of information request. We are trying to find out what education is taking place in the workplace for staff who work directly with patients. Although this form is several pages long it should take less than 10 minutes to complete.

Section	n 1		
1.	Name of your organisation	Salisbury	/ NHS Foundation Trust -
		Educatio	n
2.	Do you provide education for your	Yes	No
	healthcare staff about pain		
	management? (Delete as appropriate –		
	if NO please do not continue with the		
	form)		

Section 2

3. Who do you deliver pain education to?

The following section is divided into staff groupings. Please add a cross in the relevant box to indicate who you provide pain management education to at least annually.

	Mandatory	Optional	Mandatory for some but not all	Not provided	Not a staff group in this organisation

7.	f you have a virtual learning environment as part of your pain management					
	education please describe what methods are used (e.g. case studies, narrated					
	powerpoints, quizzes, reading materials)					
	, , , , , , , , , , , , , , , , , , , ,					
8.	Are there any other methods that you use?					
9.	Content of pain education. Please refer to Pain Team					
	The EFIC core curriculum contains seven domains. Please indicate which aspects					
	of the curricula you include in your pain education all or some of the time.					
	Pain as a biopsychosocial phenomenon impact on the individual and their					
	family/carers showing understanding of the cognitive, sensory and affective					
	dimensions					
	The impact of pain on the patient and their family/carers					
	Pain as a multidimensional phenomenon with cognitive, sensory, and affective					
	dimensions					
	The individual nature of pain and the factors contributing to the					
	person's understanding, experience and expression					
	Understand the importance of social roles, school/ work, occupational factors,					
	finances, housing and recreational/leisure activities in relation to the patients'					
	pain					
	The importance of working in partnership with and advocating for patients					
	and their families,					
	Promoting independence and self-management where appropriate					
	Prevalence of acute, chronic/persistent and cancer-related pain and the impact on healthcare and society					
	The characteristics and underlying mechanisms of nociceptive pain,					
	inflammation, neuropathic pain, referred pain, phantom limb pain and explain					
	nociplastic pain syndromes					
	The distinction between nociception and pain, including nociceptive,					
	neuropathic and nociplastic pain					
	Mechanisms of transduction, transmission, perception and modulation in					
	nociceptive pathways					
	The relationship between peripheral/central sensitization and					
	primary/secondary hyperalgesia					
	Mechanisms involved in the transition from acute to chronic/ persistent pain					
	and how effective management can reduce this risk					
	The changes that occur in the brain during chronic/persistent pain and their					
	possible impact (including cognition, memory and mood) and cognitive-					
	behavioural explanations such as fear-avoidance					
	The overlap between chronic/persistent pain and common co-morbidities,					
	including stress, sleep, mood, depression and anxiety					
	The mechanisms underlying placebo and nocebo responses, and their relation					
	to context, learning, genetics, expectations, beliefs and learning					

The role of genetics and epigenetic mechanisms in relation to risk of
developing chronic/persistent pain and pharmacotherapy
The importance of interprofessional working in pain management along with
potential barriers and facilitators to team-based care
How to work respectfully and in partnership with patients, families/ carers,
healthcare team members and agencies, to improve patient outcomes
Team working skills (communication, negotiation, problem solving, decision-
making, conflict management)
The professional perspectives, skills, goals and priorities of all team members
How to take a comprehensive pain history, an assessment of the patient across
the lifespan and in care planning, consider social, psychological, and biological
components of the pain condition
Person-centred care including how the following may influence the
experience of illness, pain, pain assessment and treatment: Social factors,
Cultural factors, Language, Psychological factors, Physical activity, Age, Health
literacy, Values and beliefs, Traditional medical practices, Patients' and families'
wishes, motivations, goals, and strengths
Patients' and families' different responses to the experience of pain and illness
including affective, cognitive, and behavioural responses
The rationale for self-report of pain and the understand in which cases nurse-
led ratings are necessary
At risk individuals for under-treatment of their pain (e.g., individuals who are
unable to self-report pain, neonates, cognitively impaired) and how to
mitigate against this.
Using different assessment tools in different situations, using a person-centred
approach
Valid, reliable and sensitive pain-assessment tools to assess pain at rest and on
movement; tools that are appropriate to the needs of the patient and the
demands of the care situation
Culturally sensitive and appropriate pain assessment for individuals who speak
a different language to the language spoken by the healthcare professionals
Understand the rationale behind basic investigations in relation to serious
pathology
What specialist assessment is, when it is needed, and how to refer.
Importance of accurate documentation
Assessment of pain coping skills and pain behaviours
Health promotion and self-management
Importance of non-pharmacological management
How to work with patients to develop goals for treatment
Evidence based complementary therapies for pain management (e.g.
acupuncture, reflexology)
Physical pain management strategies (e.g. exercise, stretching, pacing,
comfort, positioning, massage, manual therapies, heat/cold, hydrotherapy).

Psychological pain management strategies (e.g. distraction, relaxation, stress
management, patient and family education, counselling, health promotion and self-management).
Evidence based behavioural therapies (e.g. CBT, mindfulness, acceptance and commitment, couple/family therapy, hypnosis/guided imagery, biofeedback)
Electrotherapies (e.g. TENS, spinal cord stimulation)
Types of analgesics and potential combinations (non-opioids, opioids,
antidepressants, anticonvulsants, local anaesthetics)
Routes of delivery
Risks and benefits of various routes and methods of delivery (PCA, Epidural,
Nerve blocks, Plexus blocks).
Onset, peak effect, duration of effect.
Adverse events and management of these
Which drugs are appropriate to particular conditions and contexts
Side effects, detecting, limiting and managing these.
Long-term opioid use risks and benefits
Risk of addiction in different patient groups (e.g. post-operative management,
chronic pain management)
Addiction risk factors
Identification of aberrant drug use
Tapering opioid therapy
Preparation for discharge and ongoing pain management
10. Do you include anything else in your pain education that has not been
captured so far?
No
11. Is there anything else that you would like to tell us about?
No

Thank you for taking the time to provide this information. If you would like a copy of the final report please provide your email address and name below.
